<a href="#">122 Film</a>	
Epson Perfection V700/V750/800/850	122-E

Notes:

A: This holder requires use of the MA-20 or MA-21 slide mount adapter. Works with the following Coolscan models: LS-40, LS-50, LS-4000, LS-5000, V ED. These are a unique holder and they don't work like most of my other film holders. Please visit <http://www.negative-solutions.com/assets/coolscan2.pdf> to read up on how they work before ordering.

B: Plustek Opticfilm models: 7200, 7200i, 7200i SE, 7300, 7400, 7500i, 7500i SE, 7500i AI, 7600i SE, 7600i AI, 8100, 8200i SE, and 8200i AI. Strips do not need to be cut.

C: Only works with ION PICS2SD, not ION Film 2 SD Plus. I do have one that will work for the latter. Contact for more info. Users have reported that when using this holder on 126 film, some minor cropping will occur at the bottom and top of your image as the CCD sensor is not wide enough to capture the entire dimensions of 126 film.

Special Notes
800 & 850 use requires film area guide
Requires Film Area Guide
See Note "C"
See Note "B" for supported models
Does not require cutting strips
